OpenIris camera calibration targets

Print at 100% / Actual size (no fit to page, no scaling), laser printer, matte paper. Glue flat on something rigid.
Measure both 150 mm rulers with calipers and enter what they measure in the tool (printers scale a little, differently in x and y).
Hold the page facing the cameras, level, midline on the nose: each eye behind the center (missing dots) of its grid, 63 mm apart.
Use one size (A, B or C) for both eyes. For another eye distance, cut the grids apart.

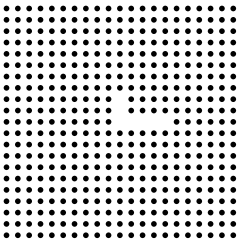

A: subject's RIGHT eye
pitch 1.0 mm, dots 0.5 mm, 31 x 31

midline

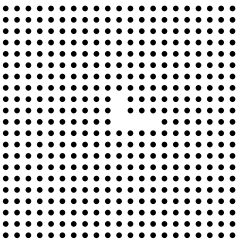

A: subject's LEFT eye
pitch 1.0 mm, dots 0.5 mm, 31 x 31

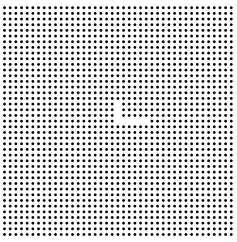

B: subject's RIGHT eye
pitch 1.5 mm, dots 0.75 mm, 21 x 21

midline

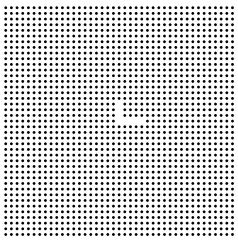

B: subject's LEFT eye
pitch 1.5 mm, dots 0.75 mm, 21 x 21

C: subject's RIGHT eye
pitch 0.75 mm, dots 0.375 mm, 41 x 41

midline

C: subject's LEFT eye
pitch 0.75 mm, dots 0.375 mm, 41 x 41

150 mm (vertical)

150 mm (horizontal)
